AMIDOPIC 33

MULCHING POINT

Amidopic is a mulch tip made from plant material derived from French agricultural co-products. It is made from 100% starch and plant fibres. Complete biodegradation takes place in situ and enters the humification cycle. 100% plant-based, the tip leaves no residue thanks to the action naturally present in the soil. The biodegradation of Amidopic is adapted to the natural anchoring of the mulch.

Using the Picpointe makes it possible to position the Amidopic precisely. The number of spikes used is optimised according to the shape and size of the mulch.

Strong points :

- Reduces drudgery
- Saves time on installation
- No tyre punctures
- No pick-up required

More informations :

Compatible with all types of mulching.

With Amidopic, once the soil has been worked, the Amidopic will be in a more aerated zone, providing sufficient soil dynamics to complete its degradation. There's no need to pick up AmidoPic because it biodegrades completely at the end of the cycle, so there's no puncture or waste in the soil.

Packaging :

- Bucket of 400 units
60 buckets / pallet

Conditions of use :

Manual installation using hammer or with the specific Picpointe (patented).

About the product :

Head diameter : 33 mm
Body length : 150 mm
Body diameter : 7 mm
Weight : 9g
